Tussentijds opvolgingsformulier Bachelorproef 2017-2018

Bachelorproef: Utilize Docker container and Selenium Grid technology to improve resource efficiency in the runtime of a Software Deployment & Testing Framework (SDTF).

Bedrijf: VASCO Data Security

Student: Arno Willaert

Promotor: Phaedra Degreef

Bedrijfspromotor: Christopher Forbes

Opleiding: Electronica-ICT: netwerken systemen en security

Periode (weeknr. volgens agenda): 6

Gerealiseerd vorige week:

Monday:
- Made a docker image that runs the chrome suite out of the box

Tuesday:
- Messed around with the dockerfile and other things to try to remove the necessity to go inside the container command line and just use docker-exec to execute the suite

Wednesday:
- Updated my planning document
- Got started on the Gantt chart
- Got started on the mid-term presentation
- Explored how to make the test suite run against Firefox

Thursday:
- Made the webadmin test suite run against Firefix
  - Against FF58 though, and not 52
  - It still uses chrome to fetch some data before running the tests though, so watch out for that

Friday:
- Further worked on the mid-term presentation
- Finished up the Gantt chart

Doelstellingen voor de volgende week:
- Do the mid-term presentation
- Create an image that runs firefox out of the box
- Make the webadmin test suite run against Internet Explorer
- Get started on the thesis
